                                                                        The present sequence represents the LGCI protein from THY (Lillium Indifferum). The sequence specifically allows expression of the quent in quentally and sperm cells of a plant. Also described are: (1) a quentific construct comprising a generally appear ell specific promoter operably linked to a transposses, which is capable of inducing transposition of a transpossable element such that upon expression of the promoter, the transpossable element such that upon expression of the promoter, the transpossable services and individually transpossition of the element (2) inducing male sterility in a plant by specially likeling a cytotoxic nucleic acid to a promoter, which directs male gamete specific expression to produce a product from the cytotoxic nucleic acid that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Protein identification, signal transduction pathway, metalvill pathway, hybridisation assay, genetic mapping: gene expression control; promoter; termination sequence.
                                                                                                                                                                                                                                                                         inactivates of Kills male gametes in the plant, and (3) a finise sterile plant produced by the method. The male gamete promoter and/or gene is useful for Incilitating male gametes percently cransposon tagging, where the product of pollen grains is screened for a range of plantygives of interest, and the transposon tagged plants are used to clone certain genes. The method is useful for producing seedbases that of that of that with reduced seed content, particularly where pollination stimulation seedless fruit. The nucleic acids enable specific genetic manipulation of the male gene inc by generating male sterile plants, and facilitating male gamers specific transposon tagging
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1. This invention describes marters acid encoding enkaryotic neutral sphingomyelinase. The products of the invention can be used for the diagnosis and treatment of diseases associated with over- and under expression, or a echancel or firminated or titily of retrieved mentral sphingomyelinase, or disturbances of refel proliferation, cell differentiation and/or apoptosis. The diseases treated are inflammatory processes, cell grawth disturbances, career and/or metabolic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Aportal splinepurelities, educatio, Hagaesis, teatmest, disease cell proliferation, cell differentiation, apoptosis, inflammatory, cell growth disturbance, cancer, metabolic disorder, arterioselerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                            SURCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

TISSUE SPECIFICITY: DETECTED IN ALL AREAS WITH NEHOCIENIC
ABILITIES. FOR EXAMPLE THE NEUROSENIC ESTYDEEM AND THE PRIMOSPIA
OF THE SENSE ORGANS. LATER EXPRESSION IS RESTRICTED TO THOSE CELLS
THAT HAVE ANOPTED A NEURAL FATE.
DEVELOPMENTAL STAGE: EXPRESSED HOTE MATERALLY AND TYPE TO THOSE CELLS
PERFESSION IS HIGHEST EARLY IN EMBRYONIC DEVELOPMENT (STAGE 5) AND
PEDIOUS IO A LOW LEVEL DUFINE LARVAL STAGES.
MISCELLANFOUS SERAPATION OF NEUROAL STAGES.
MISCELLANFOUS SERAPATION OF NEUROAL STAGES.
                                                                                                                                                                                                                                                                                                        MISCRELANROUS: NOTCH AND SPREADE MAY INTERACT AT THE PROTEIN LEVEL, IT IS CONCEIVABLE THAT THE SERRATE AND DELTA PPOPELINS MAY COMPETE FOR BINDIN: WITH THE NOTCH PROTEIN.
                                                       Drosophila melanogaster. 7.

Developmont 110:905-914(1990).

-!-FUNCTION: BSSPNTIAL FOR PROPER DIFFERENTIATION OF DATACHER. D. IS PROUTED FOR THE COPPECT SEPARATION OF NEURAL AND EPIDERMAL CELL LINEAGES.
